Don't just purge...

**ULTRA PURGE!™**

# Don't just purge... **ULTRA PURGE!™**

## Why **ULTRA PURGE™**?

**ULTRA PURGE™** products are ready-to-use or concentrated chemical, mechanical or hybrid chemical/mechanical purging compounds designed to increase productivity during color and material changes, start-ups and carbon removal procedures.

**ULTRA PURGE™** products are recommended by major machine and colorant producers as the most cost-effective and efficient solution for cleaning plastic processing machines. Contaminants are safely ejected without harming the screw, barrel or hot runner. Expanding agents in most **ULTRA PURGE™** products allow the material to clean even the hardest-to-reach areas inside your machines. **ULTRA PURGE™** is effective for color changes, material changes and the removal of black specks. **ULTRA PURGE™** works at the processing temperature of the production material.

### INCREASE EFFICIENCY AND LOWER COSTS

**ULTRA PURGE™** is more efficient when compared to other purging solutions. Scrap, downtime, color changes, material changes and shut downs will be significantly improved.

### SAFE FOR THE EQUIPMENT

**ULTRA PURGE™** is recommended by major international hot runner and machinery manufacturers. **ULTRA PURGE™** is safe for screw, barrel, hot tip and valve gated hot runner systems.

### SAFE FOR THE OPERATOR

**ULTRA PURGE™** produces no-to-low odor and no harmful fumes. It is safe for the operator and the production facility environment.

### ENVIRONMENTALLY RESPONSIBLE

Less **ULTRA PURGE™** is required in comparison to conventional mechanical purging compounds. Certain **ULTRA PURGE™** grades may be recycled, sold back to scrap dealers or mixed in with regrind and molded into parts.

Why use this much conventional mechanical purging compound...

**ULTRA PURGE™** customers typically use 2 to 3 times less material compared to conventional mechanical purging compounds.

...when you can use much less **ULTRA PURGE™**?

The next generation purging technology

This innovative cleaning technology helps plastic processors be more competitive and is included in our range of **ULTRA PURGE™** 5150 and **ULTRA PURGE™** 5160 purging compounds.

# Applications

The purging solution for all plastic applications.

Injection molding & hot runners

PET preform production

Extrusion blow molding

Blown and sheet film

Masterbatch compounding

## Industries

### AUTOMOTIVE

Maximizing profits in the competitive automotive industry is imperative to success. **ULTRA PURGE™** provides a fast and easy solution for dark-to-light color changes. **ULTRA PURGE™** offers tailored grades for the automotive industry that are easy to use and work effectively in purging screws, barrels and hot runners.

### HOUSEWARES

With safe chemical technology from **ULTRA PURGE™**, colorants and carbon deposits are softened and easily removed from extruders, injection units and hot runners. Depending on the resin and application, a specific **ULTRA PURGE™** solution will help solve your purging-related challenges.

### TECHNICAL COMPONENTS

**ULTRA PURGE™** offers specialized solutions that work with a wide variety of resins and temperatures. Our solutions are hot runner safe and can be molded. These **ULTRA PURGE™** grades also prevent the oxidation of polymers during shutdowns and start ups.

### FOOD AND PACKAGING

**ULTRA PURGE™** offers customized grades for single face, multi-cavity and stack tools, as well as for tandem molds. **ULTRA PURGE™** is 100% moldable, which allows for color changes on the fly. Most **ULTRA PURGE™** grades are in compliance with European Plastics Regulation (EU) No. 10/2011, and according to US legislation for food contact materials (21 Code of Federal Regulation, 21 CFR), most components of **ULTRA PURGE™** are either affirmed as GRAS (generally recognized as safe), or approved as direct food additives or permitted as indirect food additives.

### MEDICAL

**ULTRA PURGE™** offers various purging solutions that are completely safe for use in the medical industry. Our R&D team can assist with the validation of **ULTRA PURGE™** for use in your medical applications.

### ELECTRONIC COMPONENTS

Electronic components are often molded out of high-temperature resins. **ULTRA PURGE™** offers high-temperature grades that are effective during material changes and carbon removal.

## ABOUT US

ULTRA PURGE™ is part of Chem-Trend, a global leader in the development and production of high-performance purging compounds, release agents and ancillary processing chemicals for molding and forming operations. At Chem-Trend, our reputation is built on providing value adding solutions that increase productivity, reduce scrap and improve end-product quality for our customers.
